

The Archaeological Sciences laboratories at STARC, the Cyprus Institute, are inviting proposals for visiting researchers and students for the year 2024

The Archaeological Sciences Laboratories at STARC are fully equipped for the study of material, human, animal and plant remains. We facilitate and support archaeological science research for non-inhouse users in the following fields:

Thin-sections | Ceramic petrography | Metallurgy | High-temperature firing | Experimental Archaeology | Slag studies | Glass | Pigments | Dental anthropology | Collagen extraction | Osteology | Plant remains

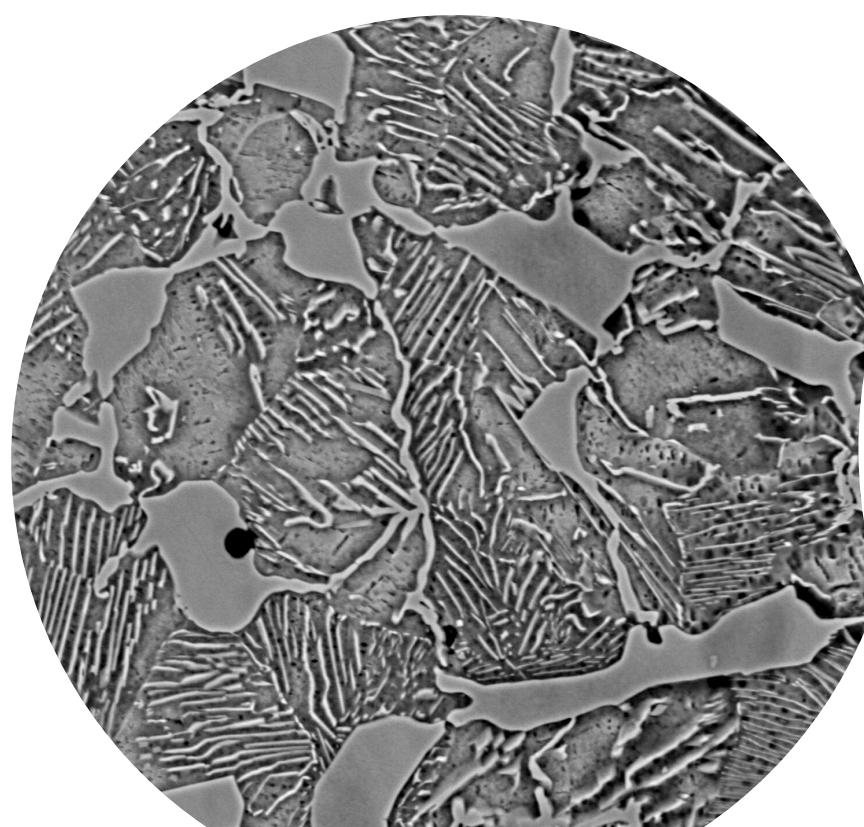

- For researchers - outsource sample preparation | analysis on Optical Microscopy | SEM-EDS | Petrography.
- For researchers - self preparation of samples | analysis | consultation with subject-matter expert.
- For students - internships and training programmes | hands-on training | material sciences | osteoarchaeology | environmental archaeology.

Don't see yourself on the list? Have a different requirement? Get in touch with us!
